Projects

6 Months

IMPACT OF CAFFEINE CONSUMPTION AMONG GENERAL POPULATION
(MAR 2025- AUG 2025)

This study is conducted with the aim to study the impact of Caffeine Consumption among the General Population. In order to understand the impact of Caffeine Consumption a self-administered questionnaires used to collect information among general population. The whole sample size was 500 general participants. The exclusion criteria were participants with Co-morbidities and participants who are not willing. Among 500 samples 240 were males and 260 were female. About 39.8% of participants were addicted to Caffeinated Beverages. 58.6% of participants feels that increased energy level after the intake of Caffeinated Beverages. A significant association (40%) was found between the Amount of Caffeine Consumption and Sleep Cycle Disturbance. If not concerned it increases the risk factor of Insomnia, further leads to mental and physical health issues.
